EXPERIENCE

FIVERR | Freelancer
January 2019 – Dec 2019
- Designed and developed static websites for more than a dozen clients on Fiverr and Up-work using Word press CMS.
- Created Logo's and other static assets for client projects.
- Integrated various WP plugins to websites including Woo Commerce and Monster Insights.

PROJECTS

STUDENT PORTAL | Github | Website
- Sole Contribution of writing server-side and deployment in Group project to make a student portal with specific requirements.
- Uses Multiple User authentication for teacher and student and constructs different UI based on user type.
- Teacher's can create courses and quizzes while student can enroll and take them.
- Custom Admin for staff members to upload notices/results.

GYMROCKET | Github
- GymRocket is a open source manager web app specially designed for small scale gymnasiums build with Django 3 and a clean minimal UI with tailwind CSS.
- Manager can manage CRUD members, manage payments, generate reports and export them as CSV.
- Deployed for a local client running on a raspberry pi and received positive feedback for automating manual labour.

FORCESALES | Github | Website
- ForceSales is a mock CRM build with Django 3 and a PostgreSQL database deployed on heroku with static files on AWS S3 buckets.
- The web-app lets manager accounts create agents and assign leads based on multiple organizations.
- Agents get a separate login to work with the lead.
- Uses MailGunAPI to send emails to agents and organizer upon transactions.
